Wire formats

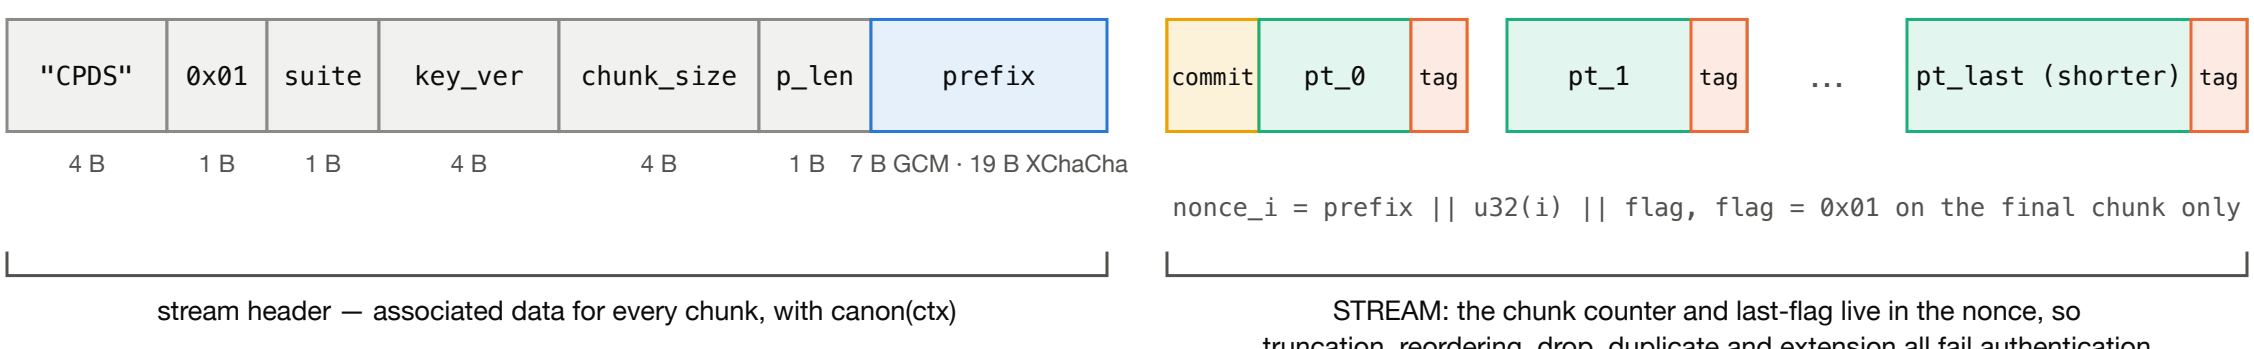

One-shot blob (cpdpm.core) and chunked stream (cpdpm.stream). Grey fields are authenticated but not encrypted.

A · ONE-SHOT BLOB

suite: 1 = AES-256-GCM, 2 = XChaCha20-Poly1305. key_version selects MK[v]. Fixed overhead per blob: 71 B (GCM), 83 B (XChaCha); text form adds 7 B and one third.

B · STREAM (large payloads)

Each chunk is released only after its tag verifies. If a later chunk fails, everything released so far must be discarded by the consumer.
